

Real-Time, Breaking News Alerts for Defence Organisations

First Alert, Dataminr's product for the public sector, uses AI to deliver the earliest signals of breaking news impacting our defence customers, wherever they operate around the world.

Our AI platform processes billions of data units daily from publicly available information sources and translates from 100+ languages to deliver real-time alerts from across the public information landscape, including global and regional social media sites, blogs and web forums, IoT sensors, audio transmissions, and the deep/dark web.

THE FIRST ALERT ADVANTAGE

Global Armed Forces rely on First Alert for the most relevant, actionable alerts to enable them to make more confident decisions that protect facilities, assets, and lives.

Accelerate response time with global, 24/7 coverage, even in degraded communications environments

Quickly understand each alert via single-sentence summaries

Easily deploy across your organisation

Receive alerts by:

- Email
- Mobile
- Web-based notifications

Streamline communications by providing relevant alerts to key teams across your organisation

**First Alert is
SECURE, SCALABLE,
AND COMPLIANT**

First Alert is
NIST 800-171,
SOC2 Type II,
and ISO-27001
compliant.

Email us today at intl-def@dataminr.com for more information or to schedule a First Alert demo.

- You'll have 24/7 support from a team of dedicated customer success professionals focused on user experience

Dataminr uses a multi-level strategy to keep user data secure from cyber attacks based on the widely-recognised NIST and ISO frameworks. As part of this strategy, multiple annual independent external assessments, evaluate and confirm the security of user data and our AI platform.

HOW FIRST ALERT WORKS

Publicly Available Information (PAI)

Processes data from 500,000+ public data sources

AI Platform

Detects the earliest signals of breaking news

Account Settings

Configures account settings based on user priorities

Alert Delivery

Delivers real-time, breaking news alerts, aligned with areas of interest
