

Travel Risk Management Reimagined: Know First. Act Faster. Protect Better.

The time between knowing and responding could be the difference between a controlled incident and a crisis. Traditional travel risk management solutions are known for slow alerting, missed risk events, siloed technology, and disjointed assistance responses, undermining traveler duty of care.

Dataminr’s industry-leading real-time risk detection keeps businesses ahead of fast-moving events, while Healix’s best-in-class intelligence and expert response ensure that that information turns into action. Combined, Dataminr and Healix close the gap between awareness and support so security teams know what’s happening and they have the best support in place to act.

Detect Hyperlocal Travel Risks with Unrivaled Coverage

Receive real-time hyperlocal alerts in 195+ countries with the purpose-built Dataminr AI platform that collects and analyzes audio, images, video, and text in 150+ languages across 1+ million public data sources.

Keep Track of Travelers and Visualize Risk Proximity

Monitor the safety of your travelers and executives with a real-time GPS mobile tracking app; visualize potential risks nearby and stay connected to ensure their well-being and whereabouts.

Respond Faster with 24/7 Medical and Security Assistance

Travelers can access contextual risk assessment and advice for events happening near them and activate expert-led medical and security assistance at the touch of a button from the point of incident.

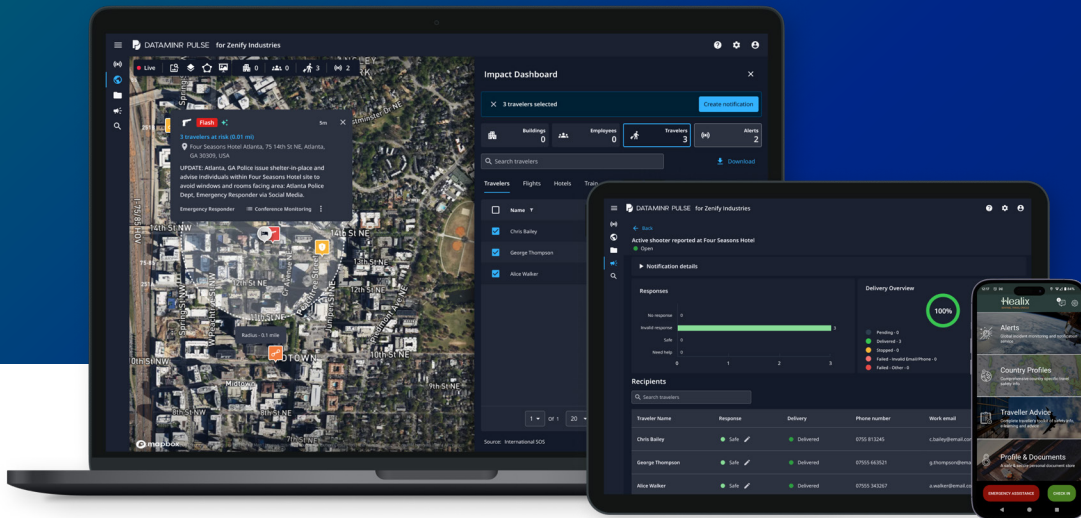

Dataminr is trusted by the world’s leading organizations

Healix safeguards people’s health and wellbeing in every corner of the world

1.1 million people looked after, **350+** clients, **12+ year** relationship with UK Government

Dataminr uses AI across over one million public data sources to detect risks, threats, and events, so you can make informed decisions with speed and confidence, while Healix provides strategic risk assessments and expert on-the-ground medical and security assistance for your at-risk employees globally.

Dataminr and Healix at Work in the Real World

Equip Your Team with Pre-Travel Local Insights

Dataminr’s hyperlocal global alert archives, alongside Healix’s country risk intelligence, make sure your travelers have a complete picture of their destination before they travel. Country profiles and briefings are curated by regional experts, and cover security risks, health concerns and practical considerations, right down to the city level, so they can be confident navigating new environments.

Increase Situational Awareness with Real-time Hyperlocal Visibility

Dataminr better ensures you never miss critical global and hyperlocal events in proximity to your travelers. Real-time speed and granular threat discovery across text, images, video, and audio sensors—in the local language—enable a comprehensive understanding of emerging risks, so you can respond immediately and keep your travelers safe.

Respond Instantly with Emergency Communications

Quickly notify impacted travelers and locations via two-way communications using customizable message templates for dozens of critical scenarios. Travelers can access an emergency ‘Mayday’ button on their mobile device to automatically generate an email alert and send it to designated contacts, along with a series of situational photographs, a sound recording, and their GPS location.

Activate Immediate Support and Expert Care

When crises strike—a medical emergency, security incident, or natural disaster—travelers can reach out for support. Healix will connect with them directly, coordinate necessary care, and if needed, manage their evacuation and safe return. 24/7 global teams, made up of doctors, nurses, and security specialists, work seamlessly alongside a network of 65k+ local providers to ensure fast, trusted responses, no matter where they are.
